Inline Descriptive Pop-ups

By Mark McEver

Configure Inline Descriptive Pop-ups

Once this module has been enabled configuration is done on the external module page.

The base configuration for this module starts with an initial one word configuration. To add a new word/pop-up select the plus sign at the top. When more than one pop up is configured, the ability to remove a pop up becomes available.
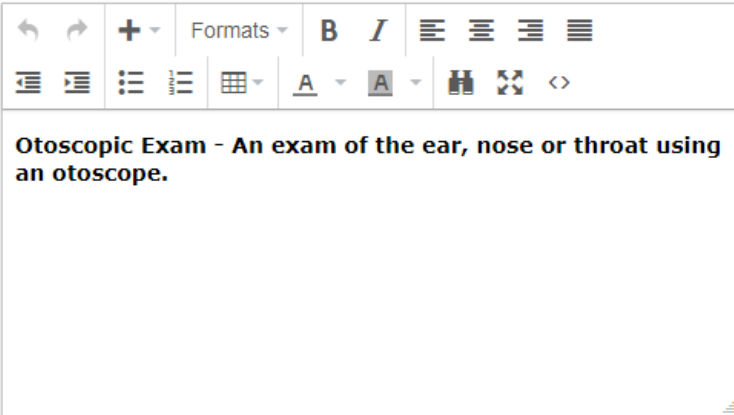

Steps to configure module:

1. Enter the word that corresponds with the pop-up. Make sure to spell the word as spelled in the project.

1. Link Text:	otoscopic

2. Type out what will displayed for the pop-up window. Here you can use different types of formatting and even html code to allow for a fully customizable text box.

1. Pop-up Text:

> **Otoscopic Exam - An exam of the ear, nose or throat using an otoscope.**

3. Select specifications for this pop-up.

1. Display on surveys:	✔	Selecting this will allow pop-up to show on surveys.
1. Display on data-entry forms:	✔	Selecting this will allow pop-up to show on data entry forms.
1. First match only:	✔	Selecting this will allow pop-up to show the first time the word is present.
1. Show pronunciation audio:	✔	Selecting this will show an option to select an audio pronunciation of the word.
1. Use Avatar if available:	✔	Selecting this will allow the use if an avatar if available.

After the completion of the configuration, the specified word will show up in a different color when data entry occurs. When the user hovers over the word, they will see the predetermined text. If the audio option was selected, they will also be able to listen to it.

My First Instrument

Otoscopic Exam - An exam of the ~~ear,~~ nose or throat using an otoscope.

Adding new Record ID 1
